Please make sure the power cord is properly plugged in and fully seated in the back of the unit.

The patient states that they do not feel anything.

Evaluate the age and wear of your accessories. This is a very common complaint and usually occurs when accessories have lost their effectiveness over time due to wear, breaks, and shorts from excessive or improper use. Also many repair requests are resolved by just re-familiarizing yourself with the proper operations and the intensity safety reset feature on all AMREX units. You can do this by visiting our website and watching a video tutorial or downloading and rereading the operational manual for your unit.

The muscle stimulation jumps or is intermittent or patient complains of shock like sensations.

Evaluate the age and wear of your accessories. This is a very common complaint and usually occurs when accessories have lost their effectiveness over time due to wear, breaks, or shorts from excessive or improper use. Also make sure you are using a proper conductive medium such as AMREX conductive spray and gel.
